1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown et al, U.S. Patent No. 6,100,208 in view of Roe et al, U.S. Patent No. 5,834,381.

Brown discloses a protective fabric which may comprise first and second nonwoven outer layers and a water impermeable, vapor permeable center layer. See abstract.

The first and second nonwoven outer layers may comprise bicomponent fibers and may further comprise polyolefins, polyamides and polyesters. See col. 7, lines 54-56. The water impermeable, vapor permeable center layer may comprise polyurethane films, (col. 9, line 64) as well as polyolefin films such as polyethylene and polypropylene films, (col. 10, lines 7-22). The layers may be bonded by ultrasonic bonding, thermal point bonding and/or adhesive bonding. See col. 11, lines 29-33. Brown teaches that the fabric may comprise additional outer and/or inter layers, but differs from the claimed invention because it does not specifically teach employing a woven or knitted layer in conjunction with the center barrier layer. Roe et al teaches that both woven and knitted reinforcements, (col. 3, lines 58-65), may be used in forming protective materials which comprise a polymeric film layers in order to reinforce the films and produce a fabric having improved tear resistance. See col. 1, line 66 – col. 2, line 15. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included a reinforcing fabric layer within the central layer of Brown et al. One of

ordinary skill in the art would have been motivated to include the central reinforcing fabric layer by the expectation that this would improve the strength and tear resistance of the Brown fabric as taught by Roe.
